

Release notes v5.2

XAMN Release v5.2 – w/c Oct 5th 2020

Highlights

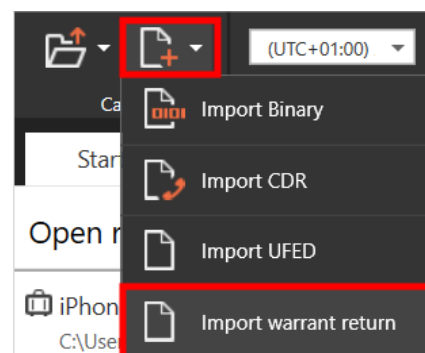

- Automatic decoding of Instagram & Facebook Warrant returns (Horizon)
- Updated Known data library

Instagram and Facebook Warrants

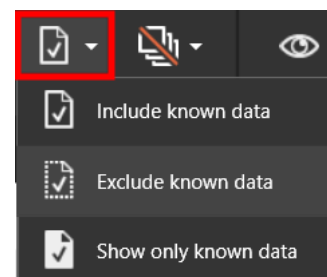

Automatic decoding support is now added for Instagram and Facebook warrant returns. Warrant return contents can be imported into XAMN via the Import function. The decoded data is stored in a .xry file which can be included as a data source in your XAMN case.

The warrant return import feature is available in the XAMN Installation version of the software. If you are using the XAMN No-install version, XRY 9.2 must be installed on the same computer. For more information please read the embedded help file.

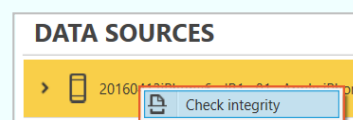

Updated Known data library

We have updated the Known data library to include more system files like common pictures and icons that can be found on most Android and iOS devices. Update to the new library to hide more irrelevant data and decrease the number of artifacts you need to investigate. The Known Data library is available to download from the [MSAB Customer Portal](#).

DID YOU KNOW?

You can use the built-in functionality in XAMN to verify .xry file content. Open a case and navigate to Data sources. Right-click the file you want to verify and select **Check integrity**. The verification process starts. If XAMN encounters any corrupted data, you will get notified with a short description.

Product support info

Make sure to upgrade to XAMN 5.2 to be able to work smoothly with the latest XRY v9.2 file format. XAMN is the default viewing tool for all XRY files. XAMN Express is the viewing tool for Kiosk & Tablet platforms. Please contact [MSAB support](#) if you have any questions.
